

AB OVO

- technical rider -

Minimum travelling crew: 2 people

Set-up and rehearsal time: 2 hours

Duration of the show: 45 min

Reduction time: 1 hour

Technical needs

Lighting is not required if the performance takes place outdoor and daytime. In all other cases, lighting is needed according to the space and time of the day.

Acoustic live music (accordion) is used during the performance.

The musical instrument may need to amplify in case of a large outdoor space or the number of the audience is more than 100, or if other outdoor events are happening in the meantime. Technical equipments and sound technician is needed in case of amplification.

The playing area and auditorium

The stage space can be outdoors, in an area of at least 7 metres in diameter and with a flat surface. No built stage needed.

Spectators can sit in a half circle around the playing field. Chairs, benches and seats occupied by spectators should be provided by the venue. (For large audiences, a raised auditorium is recommended.)

Please send us photos of the site from different angles and distances in advance.

Dressing room

We ask for a dressing room close to the venue with mirror, chair, table, toilet, shower, and drinking water.

At least one person from the host venue must be present during the performance.
